

PROJECT TITLE:

AI-Based Car Lease/Loan Contract Review Assistant

NAME:

Bhavya Singh

1. Introduction

Nowadays, many people take car loans or leases, but the contracts are often difficult to understand. These agreements contain complex terms, hidden charges, and technical language, which makes it hard for normal users to make the right decision.

This project focuses on building an AI-based assistant that helps users understand these contracts easily. The system will read the contract and highlight important details in a simple and clear way.

2. Objective

The main objectives of this project are:

- To simplify car lease and loan contracts
 - To extract important details automatically
 - To help users understand what they are agreeing to
 - To guide users in making better financial decisions
-

3. Key Features

- Users can upload a contract file (PDF)
 - The system extracts important details like:
 - Interest rate (APR)
 - Monthly payment
 - Loan or lease duration
 - Any penalties or extra charges
 - The extracted information is shown in a simple format
 - A basic AI assistant gives suggestions for negotiation
-

4. Technologies Used

- Python (FastAPI) for backend

- AI models (LLM) for understanding contracts
 - PyPDF2 for reading PDF files
 - Basic frontend for user interaction
-

5. Working Process

First, the user uploads a contract file. Then the system reads the document and extracts the text. After that, the AI analyzes the text and finds important details. Finally, the system shows the results in an easy-to-understand format and provides helpful suggestions.

6. Future Scope

In the future, this project can be improved by adding features like car price comparison, VIN-based vehicle details, and a more advanced chatbot. A mobile app version can also be developed.

7. Conclusion

This project helps users understand car loan or lease agreements in a simple way. It reduces confusion and helps people avoid hidden charges. Overall, it supports users in making better and smarter financial decisions.
